

BORIDE Engineered Abrasives

New Product Press Release

Golden Star Stone

BORIDE Engineered Abrasives, the world leader in manufacturing of polishing stones, proudly introduces its latest star in their moldstone lineup; the Golden Star.

Made from select premium aluminum oxide grain and a proprietary treatment process, the Golden Star is of medium hardness with a fast breakdown offering quick material removal while contouring quickly and leaving a silky smooth finish. The Golden Star works on all tool steels and performs exceptionally on EDM surfaces, milling and machining marks. The Golden Star does not require a lengthy pre-lubrication process and is terrific when used during hand stoning as well as with profilers.
